

**NAME**

CURLINFO\_HTTPAUTH\_AVAIL – get available HTTP authentication methods

**SYNOPSIS**

```
#include <curl/curl.h>
```

```
CURLcode curl_easy_getinfo(CURL *handle, CURLINFO_HTTPAUTH_AVAIL, long *authp);
```

**DESCRIPTION**

Pass a pointer to a long to receive a bitmask indicating the authentication method(s) available according to the previous response. The meaning of the bits is explained in the *CURLOPT\_HTTPAUTH(3)* option for *curl\_easy\_setopt(3)*.

**PROTOCOLS**

HTTP(S)

**EXAMPLE**

TODO

**AVAILABILITY**

Added in 7.10.8

**RETURN VALUE**

Returns CURLE\_OK if the option is supported, and CURLE\_UNKNOWN\_OPTION if not.
